## Histogram Processing

Histogram  $h(r_k) = n_k$

$r_k$  is the  $k^{th}$  intensity value

$n_k$  is the number of pixels in the image with intensity  $r_k$

Normalized histogram  $p(r_k) = \frac{n_k}{MN}$

$n_k$ : the number of pixels in the image of  
size  $M \times N$  with intensity  $r_k$

## Histogram Equalization

- The objective is to get a **uniform histogram** of the resultant image .
- The intensity level in an image may be viewed as random variables in the interval
- Let  $f(x)$  and  $g(y)$  denote the probability density function (PDF) of random variables  $x$  and  $y$  .
- **$f(x)$  is continuous and differentiable**
- **If  $f(x)$  and  $g(y)$  are known and  $f(x)$  satisfies condition (a) then the PDF of the transformed random variable  $y$  can be obtained by**

## Histogram Equalization

$$s = T(r) = (L - 1) \int_0^r p_r(w) dw$$

Cumulative Distribution Function  
Satisfies condition (a) and (b)

$$\begin{aligned} \frac{ds}{dr} &= \frac{dT(r)}{dr} = (L - 1) \frac{d}{dr} \left[ \int_0^r p_r(w) dw \right] \\ &= (L - 1) p_r(r) \end{aligned}$$

$$p_s(s) = \frac{p_r(r) dr}{ds} = p_r(r) \bigg/ \left( \frac{ds}{dr} \right) = p_r(r) \bigg/ ((L - 1) p_r(r)) = \frac{1}{L - 1}$$

## Histogram Equalization

**FIGURE 3.18** (a) An arbitrary PDF. (b) Result of applying the transformation in Eq. (3.3-4) to all intensity levels,  $r$ . The resulting intensities,  $s$ , have a uniform PDF, independently of the form of the PDF of the  $r$ 's.

# Image Enhancement in Spatial Domain

## Histogram Equalization: Example

Suppose that the (continuous) intensity values in an image have the PDF

$$p_r(r) = \begin{cases} \frac{2r}{(L-1)^2}, & \text{for } 0 \leq r \leq L-1 \\ 0, & \text{otherwise} \end{cases}$$

Find the transformation function for equalizing the image histogram.

# Image Enhancement in Spatial Domain

## Histogram Equalization: Example

$$\begin{aligned} s = T(r) &= (L - 1) \int_0^r p_r(w) dw \\ &= (L - 1) \int_0^r \frac{2w}{(L - 1)^2} dw \\ &= \frac{r^2}{L - 1} \end{aligned}$$

# Image Enhancement in Spatial Domain

## Histogram Equalization

Continuous case:

$$s = T(r) = (L - 1) \int_0^r p_r(w) dw$$

Discrete values:

$$s_k = T(r_k) = (L - 1) \sum_{j=0}^k p_r(r_j)$$

is the probability of Occurrence of gray level in an image

$$= (L - 1) \sum_{j=0}^k \frac{n_j}{MN} = \frac{L - 1}{MN} \sum_{j=0}^k n_j \quad k=0,1,\dots, L-1$$

Let  $s$  be the random variable with the probability

$$s = T(r) = (L - 1) \int_0^r p_r(w) dw$$

Define a random variable  $z$  with the probability

$$G(z) = (L - 1) \int_0^z p_z(t) dt = s$$

$$G(z) = (L - 1) \int_0^z p_z(t) dt = s$$

$$z = G^{-1}(s) = G^{-1}[T(r)]$$

**Note:** can be obtained once has been estimated from the input image. can be obtained since is given.

# Image Enhancement in Spatial Domain

## Histogram Matching: Procedure
